

Route 23 Honda

Pompton Plains, NJ

GC: Klæ Construction
Architect: Mylan Architectural Group

New construction

KLAE COMPLETED THIS NEW DEALERSHIP FACILITY FOR Route 23 Honda in Pompton Plains, NJ. Originally planned to have been built in phases to accommodate the existing facility's operations, careful coordination of activities allowed construction of the new building before any demolition of the existing one. Special features include; indoor service reception, customer waiting center, kid's play area, covered vehicle delivery center, wash bay, vehicle detail room, second floor office and parts storage, and a service area with eighteen bays. Site constraints dictated the construction of a three level covered parking garage for vehicle inventory parking with provisions for two freight elevators.

We are happy to have been chosen to provide a negotiated Construction Management type of project delivery service for this prestigious project. This method of agreement allows the greatest opportunity to find the lowest costs and best value for the owner through continued competitive pricing throughout the project and through continuous evaluation of design for cost saving modifications and alternatives. We are proud to add Route 23 Honda to our list of satisfied clients.
