

ETD Discount Tire Center

Clifton, NJ

GC: Klæe Construction

New pre-engineered steel building

KLAE CONSTRUCTION COMPLETED THIS NEW RETAIL center in Clifton, N.J. for Englewood Tire Distributors of Lyndhurst, N.J. With the initial building design coming in over budget, Klæe personnel worked closely with the architect and owner in evaluating each and every element of the project.

The most significant change was the substitution of the heavy and complex structural steel building frame with an efficient Star Buildings pre-engineered steel building

system. This change resulted in cost savings that brought the project within budget without compromising its function or appearance.

The building features an 8-on-12 pitch roof with dark green standing seam roof panels, decorative concrete block walls, acrylic stucco finish and aluminum and glass storefronting.
