THIS IS THE THIRD RETAIL CENTER KLAЕ CONSTRUCTION completed for Englewood Tire Distributors of Lyndhurst, NJ and is located on Hamburg Turnpike in Wayne, NJ.

Klae Construction picked a team of professionals and provided both the building design and construction for the 6,000-square-foot facility. The new store features the use of a pre-engineered steel building with a 1,000-square-foot show-room and seven service bays.

Design/Build contracting uses a dynamic method of project delivery with active and continual communication between the owner, designers and construction personnel.

Design and construction expertise is leveraged to evaluate methods and materials of all components in the project. Cost evaluations are progressively made as the design process proceeds and decisions affecting cost and design are continuously optimized for the greatest value.
