AFTER A CAREFUL REVIEW OF COMPETITIVE BID proposals, SGS Slicing Solutions Inc. selected Klæ Construction to build their new headquarters on Route 94 in Blairstown, N.J.

The project included full development of the vacant site including earth cut and fill, storm water detention basin, septic system, well drilling, paving and curbing.

The building structure features the use of a "Star" pre-engineered steel building with an expandable end-wall frame in preparation for a future addition. A standing seam metal panel roof system and a combination of metal panels, split face block, synthetic stucco and glass at the exterior walls completes the envelope.

The 10,000 square-foot building includes 8,100 square-foot of warehouse/shop area with two loading docks and a 1,900 square-foot office area.
